Review

Production of nanocrystalline cellulose from lignocellulosic biomass: Technology and applications

L. Brinchi^{a,*}, F. Cotana^a, E. Fortunati^b, J.M. Kenny^{b,c}

^a Centro di Ricerca sulle Biomasse, CRB, University of Perugia, Via G. Duranti snc, 06125 Perugia, Italy

^b Materials Engineering Center, Udr INSTIM, University of Perugia, Strada Pentima Bassa 4, 05100 Terni, Italy

^c Institute of Polymer Science and Technology, ICTP-CSIC, Juan de la Cierva 3, 28006 Madrid, Spain

This is a review article. No financial support is cited. They are probably searching for new applications for biomasses

Acknowledgements

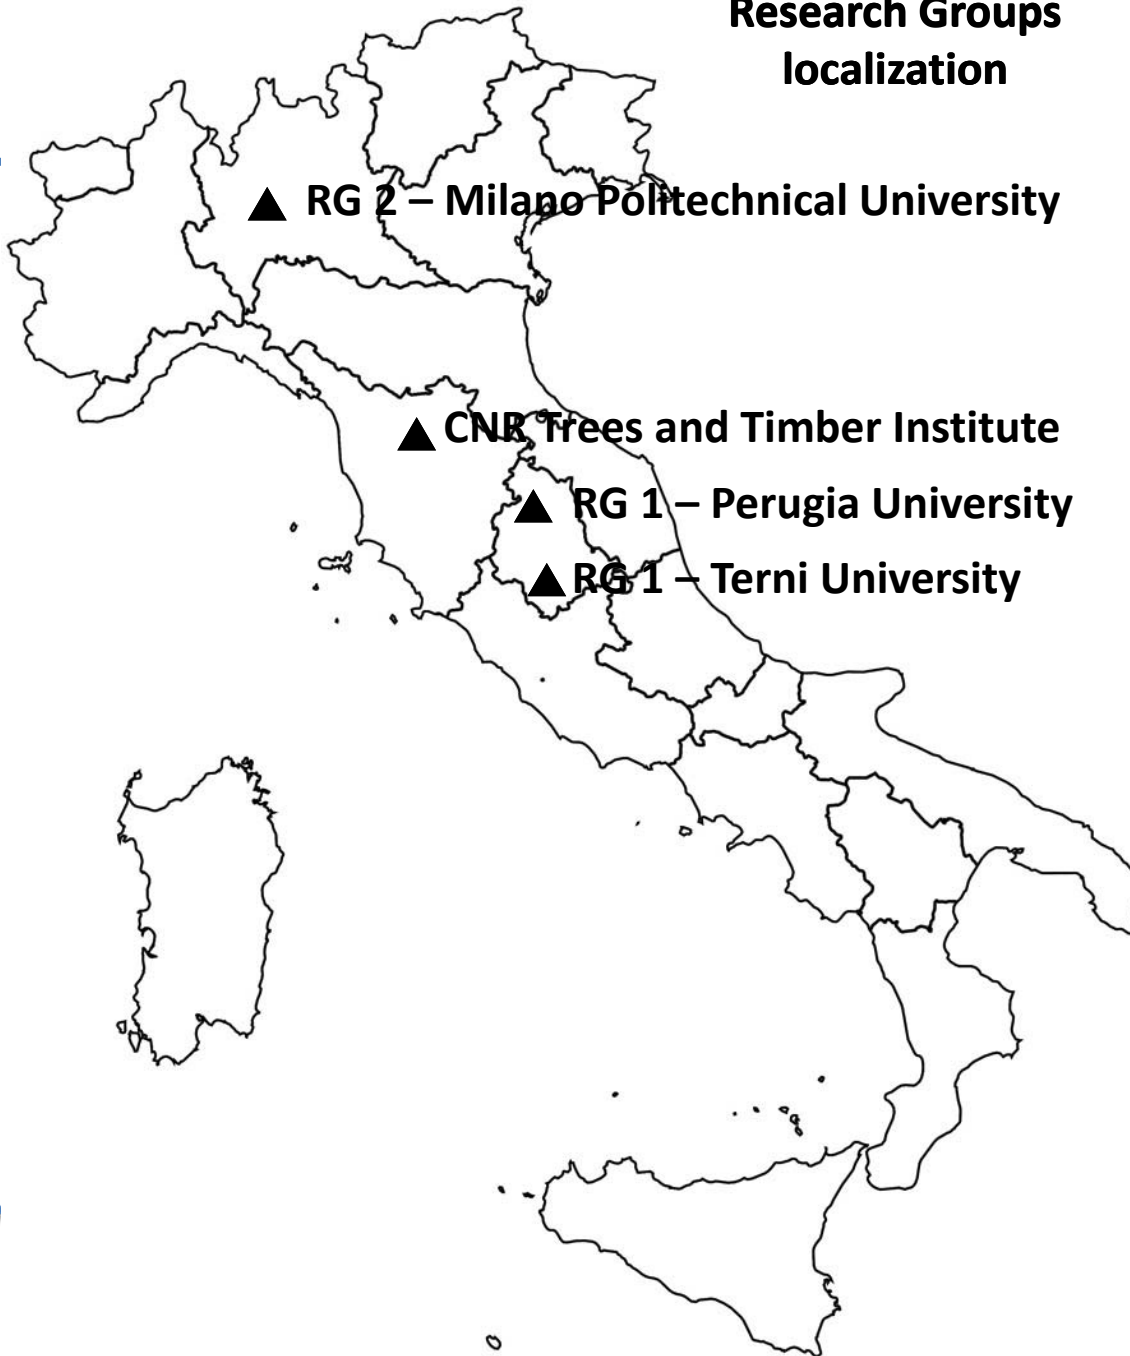

The Italian Government for partial financial support: FIRB 2006 RBIP06HF8S Project “Materiali E Tecnologie Innovativi Per Il Tessile Italiano” (MTIT) Subproject: “Individuazione fonti alternative per l’ottenimento della materia prima necessaria per la filature ad umido di fibre cellulosiche con processi viscosa e cuproammoniacale”.

Istituto di Ricerche Chimiche e Biochimiche “G. Ronzoni” of Milano, Italy and its staff. In particular, Sig. Cesare Cosentino for the NMR facilities and experiments.

- This research received financial support from Italian Government for the innovative materials and technologies in the textile sector.
